

Online Pharmacy Platform - Product Requirements Document (PRD)

Version

v1.0 (MVP)

1. Product Vision

Build a digital platform that enables local medical shops to receive medicine orders online, allowing customers to upload prescriptions or search medicines, place orders from home, and receive doorstep delivery.

The platform should simplify medicine ordering for customers while helping local pharmacies increase sales, improve operational efficiency, and compete with large online pharmacy platforms.

The long-term vision is to evolve into a SaaS platform that can be used by thousands of independent pharmacies across India.

2. Target Users

Primary Users

Customer / Patient

A customer who wants medicines delivered to their home.

Medical Shop Owner

A pharmacy owner who manages medicine inventory and fulfills customer orders.

3. Core Objectives

For Customers

- Order medicines within a few minutes.
- Upload a doctor's prescription.

- Search and purchase OTC medicines.
- Save delivery addresses.
- Track order progress.
- Receive medicines at their doorstep.

For Pharmacy Owners

- Receive online orders.
 - View uploaded prescriptions.
 - Manage medicine inventory.
 - Accept or reject orders.
 - Update order status.
 - Increase local business through digital ordering.
-

4. MVP Features

Customer Module

Authentication

- Register using mobile number
- Login
- Forgot Password (Future)

Medicine Ordering

Customers can:

- Search medicines
- Browse medicine categories
- View medicine details
- Add medicines to cart
- Update quantity
- Remove medicines

Prescription Upload

Customers can upload:

- JPG
- PNG
- PDF

The system should store the original prescription securely.

AI/OCR (when available) should attempt to extract:

- Patient Name
- Doctor Name
- Hospital / Clinic Name
- Doctor Contact Number
- Doctor Registration Number (if available)
- Prescription Date
- Medicine Name
- Dosage
- Frequency
- Quantity
- Duration
- Special Instructions

If extraction confidence is low, the pharmacy owner should review the original prescription manually.

Address Management

Customer can:

- Add Address
- Edit Address
- Save Multiple Addresses
- Select Delivery Address

Checkout

Customer confirms:

- Medicines
- Delivery Address
- Doctor Details (if extracted)
- Payment Method
- Final Amount

Payment

MVP

- Cash on Delivery
- UPI Payment Screenshot / UPI Intent (basic)

Future

- Razorpay
- PhonePe
- Google Pay

- Credit Card
 - Wallets
-

5. Pharmacy Owner Module

Dashboard

View

- Today's Orders
- Pending Orders
- Accepted Orders
- Delivered Orders
- Cancelled Orders

Medicine Management

- Add Medicine
- Edit Medicine
- Delete Medicine
- Update Stock
- Update Price
- Mark Out of Stock

Prescription Management

View uploaded prescriptions.

View extracted AI information.

Verify or correct extracted medicines.

Order Management

- Accept Order
- Reject Order
- Modify Medicine Availability
- Update Order Status

Order Statuses

10. AI Capabilities

The platform should be designed to integrate AI services.

Future AI Features

- OCR Prescription Reading
 - Medicine Detection
 - Dosage Detection
 - Duplicate Medicine Detection
 - Medicine Recommendation (with pharmacist approval)
 - Auto-fill Order Details
 - Prescription Validation
 - Medicine Availability Prediction
-

11. Admin Features

Dashboard KPIs

- Orders Today
- Revenue Today
- Pending Orders
- Delivered Orders
- Active Customers
- Medicines in Stock
- Low Stock Count

Reports

- Daily Sales
 - Weekly Sales
 - Monthly Sales
 - Top Selling Medicines
 - Customer Growth
 - Revenue Trends
-

12. Future Roadmap

Phase 2

- Delivery Partner Module
- Live Order Tracking
- SMS Notifications
- WhatsApp Notifications
- Online Payment Gateway
- Coupons
- Discounts

- Customer Reviews

Phase 3

- Multiple Pharmacy Support
- Franchise Management
- Vendor Portal
- Mobile Apps (Android/iOS)
- Analytics Dashboard
- AI Chat Assistant
- Voice-based Medicine Search
- Subscription Medicine Refills

13. Recommended Project Structure

```
pharmacy-platform/  
  
├─ app.py  
├─ config.py  
├─ requirements.txt  
├─ database.db  
  
├─ models/  
├─ routes/  
├─ services/  
├─ utils/  
  
├─ templates/  
│   ├─ customer/  
│   ├─ admin/  
│   └─ shared/  
  
├─ static/  
│   ├─ css/  
│   ├─ js/  
│   ├─ images/  
│   └─ uploads/  
  
├─ instance/  
  
├─ migrations/  
  
└─ tests/
```

14. MVP Scope

The first working demo should include:

- ✓ Customer Login
 - ✓ Medicine Search
 - ✓ Medicine Listing
 - ✓ Medicine Details
 - ✓ Add to Cart
 - ✓ Upload Prescription
 - ✓ Address Management
 - ✓ Cash on Delivery
 - ✓ Place Order
 - ✓ Pharmacy Dashboard
 - ✓ Medicine Management
 - ✓ Order Management
 - ✓ SQLite Database
-

15. Success Criteria

A local pharmacy should be able to use the platform to:

- Receive medicine orders online.
- View uploaded prescriptions.
- Process customer orders digitally.

- Manage medicine inventory.
- Demonstrate a complete order flow from customer to pharmacy without relying on phone calls or WhatsApp.
